

Adding a clock

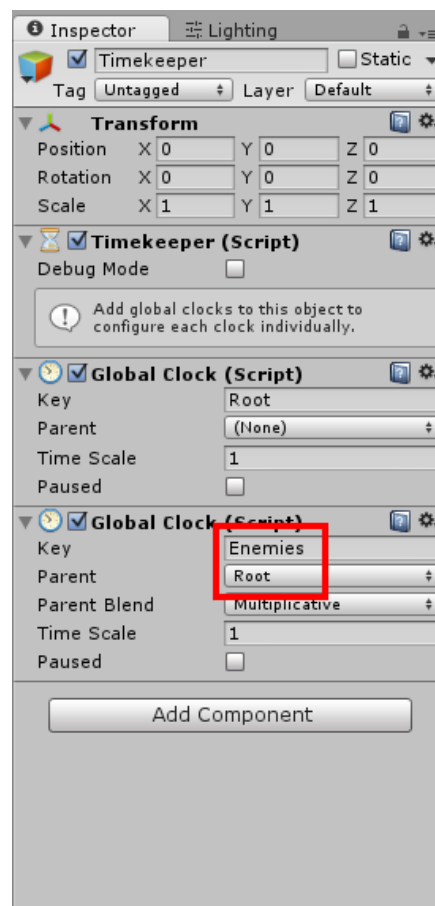

Updated: 2018-09-06

Select the Timekeeper to display its inspector. There, you will see that it already contains a Root clock by default. Let's add our clock by clicking the **Add Component** button, then choosing **Time > Global Clock**.

Then, set its key to **Enemies** and its parent to **Root**. Since we want our enemies to start at normal speed, there is no need to adjust the Time Scale or Paused properties.

1. Add a Global Clock

2. Set its properties
