

How can I enable scale rewinding?

Updated: 2018-09-06

Scale rewinding is disabled by default to alleviate memory pressure.

You can easily enable it by doing uncommenting a few lines:

```
// public Vector3 scale;  
// scale = Vector3.Lerp(from.scale, to.scale, t),
```

These lines are found in:

- **Source/Timelines/TransformTimeline.cs**, line 15, line 23
- **Source/Timelines/RigidbodyTimeline2D.cs**, line 15, line 29
- **Source/Timelines/RigidbodyTimeline3D.cs**, line 15, line 28
