

LocalClock

Updated: 2018-09-06

A Clock that only affects a Timeline attached to the same GameObject.

Methods

`void CacheComponents()`

The components used by the local clock are cached for performance optimization. If you add or remove the Timeline on the GameObject, you need to call this method to update the local clock accordingly.

Previous

GlobalClock

A Clock that affects all Timeline and other global clocks configured as its children.

Next

AreaClock

A Clock that affects every Timeline within its collider by multiplying its time scale with that of their observed clock.
