

Migration Tables

Updated: 2018-09-06

Chronos is designed integrate into any project with as few changes as possible. Unfortunately, there are some cases where you will have to make minimal changes to your scripts. For your convenience, these are all catalogued in the following tables.

In the following tables, remember that `Timeline` is a component, not a static class. It is only referred to as such for brevity. You must replace it with `myGameObject.GetComponent<Timeline>()` in your actual scripts.

Time

Instead of ...	Use...
<code>Time.deltaTime</code>	<code>Timeline.deltaTime</code>
<code>Time.fixedDeltaTime</code>	<code>Timeline.fixedDeltaTime</code>
<code>Time.timeScale</code>	<code>Timekeeper.Clock("Root").localTimeScale</code>
<code>new WaitForSeconds()</code>	<code>Timeline.WaitForSeconds()</code>

Animation

Instead of ...	Use...
<code>Animator.speed</code>	<code>Timeline.animator.speed</code>
<code>AnimationState.speed</code>	<code>Timeline.animation.speed</code>

Particles

Instead of	Use
------------	-----

Instead of ...	Use...
ParticleSystem.playbackSpeed	Timeline.particleSystem.playbackSpeed
ParticleSystem.time	Timeline.particleSystem.time
ParticleSystem.isPlaying ParticleSystem.isPaused ParticleSystem.isStopped	Timeline.particleSystem.isPlaying Timeline.particleSystem.isPaused Timeline.particleSystem.isStopped
ParticleSystem.Play() ParticleSystem.Pause() ParticleSystem.Stop()	Timeline.particleSystem.Play() Timeline.particleSystem.Pause() Timeline.particleSystem.Stop()
ParticleSystem.IsAlive()	Timeline.particleSystem.IsAlive()

Audio

Instead of ...	Use...
AudioSource.pitch	Timeline.audioSource.pitch

Navigation

Instead of ...	Use...
NavMeshAgent.speed	Timeline.navMeshAgent.speed
NavMeshAgent.angularSpeed	Timeline.navMeshAgent.angularSpeed

Physics

Unless specified, all members below have a `Timeline.rigidbody2D` equivalent for 2D.

Instead of ...	Use...
Rigidbody.mass	Timeline.rigidbody.mass
Rigidbody.velocity	Timeline.rigidbody.velocity

Instead of ...	Use...
<code>Rigidbody.angularVelocity</code>	<code>Timeline.rigidbody.angularVelocity</code>
<code>Rigidbody.drag</code>	<code>Timeline.rigidbody.drag</code>
<code>Rigidbody.angularDrag</code>	<code>Timeline.rigidbody.angularDrag</code>
<code>Rigidbody.isKinematic</code> <code>Rigidbody2D.bodyType</code>	<code>Timeline.rigidbody.isKinematic</code> <code>Timeline.rigidbody2D.bodyType</code>
<code>Rigidbody.useGravity</code> <code>Rigidbody2D.gravityScale</code>	<code>Timeline.rigidbody.useGravity</code> <code>Timeline.rigidbody2D.gravityScale</code>
<code>Rigidbody.AddForce()</code> <code>Rigidbody.AddRelativeForce()</code> <code>Rigidbody.AddForceAtPosition()</code> <code>Rigidbody.AddExplosionForce()</code> <code>Rigidbody.AddTorque()</code> <code>Rigidbody.AddRelativeTorque()</code>	<code>Timeline.rigidbody.AddForce()</code> <code>Timeline.rigidbody.AddRelativeForce()</code> <code>Timeline.rigidbody.AddForceAtPosition()</code> <code>Timeline.rigidbody.AddExplosionForce()</code> <code>Timeline.rigidbody.AddTorque()</code> <code>Timeline.rigidbody.AddRelativeTorque()</code>

Wind Zones

Instead of ...	Use...
<code>WindZone.windMain</code>	<code>Timeline.windZone.windMain</code>
<code>WindZone.windTurbulence</code>	<code>Timeline.windZone.windTurbulence</code>
<code>WindZone.windPulseMagnitude</code>	<code>Timeline.windZone.windPulseMagnitude</code>
<code>WindZone.windPulseFrequency</code>	<code>Timeline.windZone.windPulseFrequency</code>

Next

Third-Party Plugins →

Chronos can be integrated with third-party plugins that provide their source code.
